

Algebra 1: Unit 8, Lesson 4

1. The factored form of a quadratic equation is shown.

$$y = -4(x - 1)(x + 3)$$

What is the y -intercept?

2. A quadratic equation is shown.

$$y = -4x^2 + x - 2$$

Complete the table of values.

x	y
-3	-41
-2	-20
-1	
0	-2
1	-5

3. A quadratic equation is shown.

$$y = -(x + 1)^2 + 9$$

What is the axis of symmetry of the given equation?
