

Algebra 1: Unit 8, Lesson 6

1. A diagram of algebra tiles is shown below.

A student wrote the expression $2(x + 4)^2 - 3$ to represent the algebra tile diagram above, but made a mistake. Fix the students' error.

2. The table shows an expression modeled with algebra tile product mats.

$4x^2 + 16x + 16$				
	x	1	1	
x	x^2	x	x	
1	x	1	1	
1	x	1	1	
	x	1	1	
x	x^2	x	x	
1	x	1	1	
1	x	1	1	

For the algebra tile representation of $4x^2 + 16x + 16$, there are four product mats to rewrite the expression as squares because the leading coefficient is _____.

3. The algebra tiles on the mat represent the expression, $x^2 + 2x - 8$.

Write the equivalent expression by completing the square.
