

Question	4	Benchmark(s)	MA.912.AR.3.4
Work $y = a(x - 6)^2 + 3922$$3934 = a(7 - 6)^2 + 3922$$3934 = a + 3922$$12 = a$ Equation $y = 12(x - 6)^2 + 3922 \text{ or } y = 12x^2 - 144x + 4354$		Recommended Scoring (18 Total Points)	Consider giving partial credit using the following: • 4 points for correct substitution of vertex • 4 points for correct substitution of another point • 2 points for correct expansion • 2 points for correct a-value (any equivalent) • 6 points for correct equation in either vertex or standard form (equation is not factorable)
		Notes	It is possible for students to choose to use the standard form of a quadratic. Students who use this form should not be punished for correct mathematics. Carefully examine their work to consider partial work. If students make a minor error, consider following student work to give partial credit for subsequent correct steps following their error.
