

Algebra 1: Unit 9, Lesson 3

1. The table of values of a quadratic function is shown.

x	-2	0	1	2	3	6
$f(x)$	12	0	-3	-4	-3	12

Determine the vertex of the function.

2. The table of values for a quadratic function, $f(x)$ is shown.

x	1	2	3	4
$f(x)$	13	-2	-7	-2

Arianna partially completes writing the vertex form of the function as $f(x) = 5(x - h)^2 + k$. Rewrite the quadratic function in vertex form using the vertex.

3. The table of values of a quadratic function is provided.

x	-1	0	2	3	4	6
$f(x)$	32	17	5	8	17	53

Melissa determined that the vertex of the quadratic function is (2,5). She used the point, (-1,32) to write the vertex form of the function equation.

$$32 = a(-1 - 2)^2 + 5$$

What is the value of a ?
