

Algebra 1: Unit 9, Lesson 7

1. An equation is shown.

$$(x - 4)(x + 7) = 0$$

What are the zeroes?

2. An equation is shown.

$$x^2 - 9x - 22 = 0$$

An incomplete step to solving the equation is shown.

$$(x + 2)(x - \underline{\hspace{2cm}}) = 0$$

Determine the missing value.

3. What are the values of x for which the expression $(7x - 14)(x + 4)$ would equal 0?
