

Algebra 1: Unit 11, Lesson 3

1. An equation is given.

$$y = 3(0.35)^x$$

The a -value indicates that the y -intercept. What is the y -intercept?

2. Which of the following equations represent exponential growth?

$$y = 2\left(\frac{1}{2}\right)^x, y = (1 - .03)^x, y = -1\left(\frac{3}{2}\right)^x, y = \left(\frac{1}{3}\right)^x$$

3. An exponential equation is shown, $y = -1\left(\frac{2}{3}\right)^x$.

Does the graph demonstrate exponential growth or decay?
