

Algebra 1: Unit 11, Lesson 5

1. A graph of a function is shown.

What is the a value when writing the equation for the graph?

2. A graph is shown.

The y -intercept is $(0, -2.7)$ and can be used to find the a -value of the exponential equation. The a -value is -2.7 . The second point, $(1, -4.32)$ can be substituted into the equation $y = -2.7(b)^x$ to find the b -value. What is the b value?

3. A table of values is shown.

x	y
0	-4
1	-8
2	-16
3	-32
4	-64

What is the equation that models the data in the table?
