

Unit 12: Worked Examples

The histogram summarizes the lengths, in feet (ft), of a group of adult female sharks.

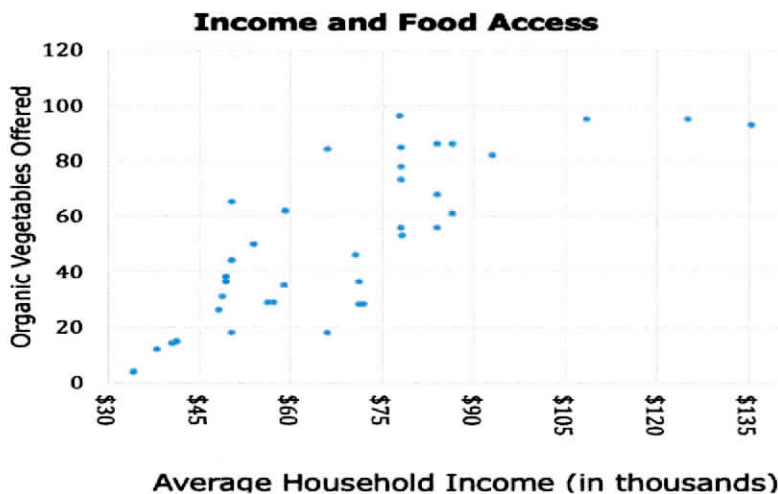

1. Describe the shape, interpret the mean, and interpret the variation.

Shape = Symmetrical

mean = The average length of an adult female shark is 15.4 ft.

Variation = Minimal variation in the data. The difference between the longest and shortest shark is about 4.5 feet.

2. Determine if the display shows an example of correlation or causation.

Correlation
