

Algebra 1  
Unit 12  
Lesson 2 Homework

Name \_\_\_\_\_  
Date \_\_\_\_\_  
Period \_\_\_\_\_

Identify whether each type of data is categorical or numerical. Then identify if it is univariate or bivariate.

1. The number of houses sold in Broward County in different price ranges.

☐ Categorical  
☐ Numerical

☐ Univariate  
☐ Bivariate

2. The types of houses sold in Broward County.

☐ Categorical  
☐ Numerical

☐ Univariate  
☐ Bivariate

3. The number of houses sold in Broward County different price ranges and the average time the houses are on the market for.

☐ Categorical  
☐ Numerical

☐ Univariate  
☐ Bivariate

Use the following for questions 4-6.

Greg was in the market for a new SUV. He recorded the fuel efficiency for his top 12 choices.

{22.5, 17.2, 18, 20.2, 13.6, 19.4, 14, 20.4, 11.6, 16, 15.9, 20}

4. This data set is ☐ Categorical  
☐ Numerical and ☐ Univariate  
☐ Bivariate

5. Which is the best graphical representation to display the data?

☐ Scatterplot  
☐ Box plot  
☐ Line Plot  
☐ Histogram  
☐ Circle Graph  
☐ Stem-and-leaf plot  
☐ Bar Graph

6. Create a graphical representation for the data chosen in question 5.

The National Weather Center collected data on weather conditions in various locations. Data was collected over a few years comparing the elevation above sea level in feet and the average number of clear days in 12 different cities in the United States.

| City               | Elevation above sea level | Average number of clear days |
|--------------------|---------------------------|------------------------------|
| Anchorage, AK      | 102                       | 45                           |
| Boston, MA         | 141                       | 102                          |
| Tampa, FL          | 48                        | 146                          |
| Salt Lake City, UT | 4,226                     | 95                           |
| Charlotte, NC      | 761                       | 127                          |
| Seattle, WA        | 174                       | 78                           |
| Boise, ID          | 2,730                     | 115                          |
| Milwaukee, WI      | 617                       | 90                           |
| New York, NY       | 33                        | 72                           |
| Cincinnati, OH     | 482                       | 111                          |
| Boulder, CO        | 5,430                     | 65                           |
| San Francisco, CA  | 52                        | 198                          |

7. The data shown in the table is
 

☐ univariate.  
☐ bivariate.
8. The data in the table should be displayed in a
 

☐ line plot  
☐ scatter plot

 .
9. Explain your reasoning from question 8.
10. Create a display to represent the relationship between elevation above sea level and the average number of clear days.
