

Algebra 1: Unit 12, Lesson 6

1. A survey was conducted in 2021 on how often a group of U.S. adults visit social media platforms. 369 of the 820 adults surveyed reported that they visit Instagram at least once per day.

What is the estimated proportion of all U.S. adults who visit Instagram at least once per day to the nearest hundredth?

2. A large construction company tracked the amount spent on each of their Driscoll's Home Center purchases over the past five years. For a sample of 102 purchases, the average amount spent was \$515.68 with a margin of error of ± 5.76 .

Write an expression to find the lower end of the range of the average amount spent per purchase and an expression to find the upper end of the range.

3. A survey was conducted in 2021 on how often a group of U.S. adults visit social media platforms. 432 of the 800 adults surveyed reported that they visit YouTube at least once per day.

Complete the statement.

The estimated proportion of adults who visit YouTube at least once per day is $\frac{\underline{\hspace{1cm}}}{800} = 0.54$.
