

Unit 13: Worked Examples

1. When Sarah was born, her grandfather put \$2,500 into a savings account for her. The savings account earns a 2.5% simple interest rate. What is the total amount in the account when Sarah turns 7?

$$2500(.025 \cdot 7)$$

$$2500(0.175)$$

$$\$437.50 + \$2,500 = \$2,937.50$$

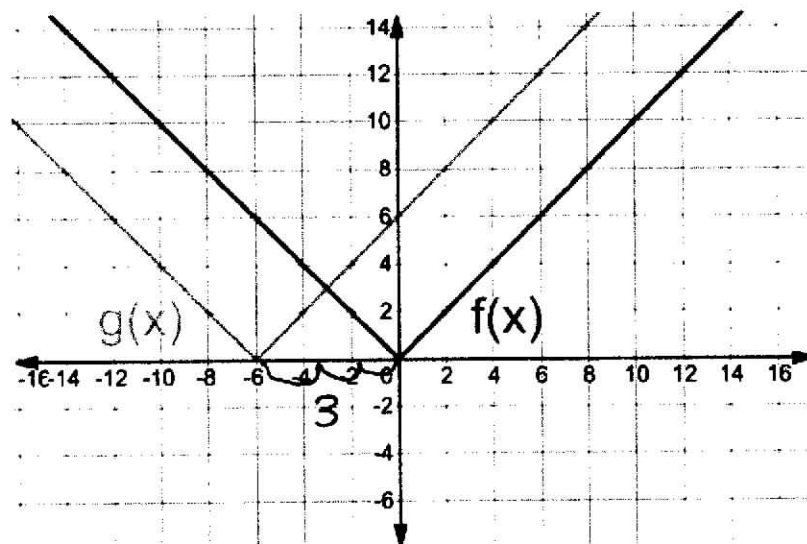

2. Freida deposited \$32,000 in a savings account with a 4.25% APR compounded monthly. What is the value of the account at the end of the *first* year?

$$32000 \left(1 + \frac{0.0425}{12}\right)^{12}$$

$$32000 (1.003541\bar{7})^{12}$$

$$\$33,386.81$$

3. Write the equation of $g(x)$, a transformation of $f(x)$.

$$g(x) = |x+3|$$
