

Algebra 1: Unit 13, Lesson 2

1. The graph shows an initial investment of \$4,000 in a savings account. The interest rate is 6.25% and is compounded quarterly.

What does the y -value of the coordinate, $(16, 10789.38)$ represent?

2. The graph shows an initial investment of \$4,500 in a savings account. The interest rate is 3.25% and is compounded monthly.

What does the x -value of the coordinate, $(12, 6642.91)$ represent?

3. The equation, $A = 1012 \left(1 + \frac{0.1012}{6}\right)^{6t}$ can be used to model the total amount in a savings account at a local bank.

What is the final amount in the savings account after 15 years?
