

The graphs of $y = f(x)$ and $y = g(x)$ are shown.

- Describe how to shift the graph of $f(x)$ so that it coincides with the graph of $g(x)$.
- Use the graph to complete the table of values for $f(x)$ and $g(x)$.

$f(x)$		$g(x)$	
x	y	x	y
-1		-1	
0		0	
1		1	

- Explain the change in the y -values from $f(x)$ to $g(x)$.

- Complete the statement:

The graph of $g(x)$ is a
☐ horizontal
☐ vertical
 shift of $f(x)$.

- Complete the statement:

The shift is seen in the table by
☐ adding
☐ subtracting
 4 to each
☐ x -value
☐ y -value

for each corresponding
☐ x -value.
☐ y -value.

For 6-7, complete the statements to describe how the graph of $g(x) = f(x) + 7$ compares to the graph of $f(x) = |x - 1|$.

6. The graph of $g(x)$ is a

horizontal
 vertical

 shift of $f(x)$.

7. The graph of $g(x)$ is shifted _____ units

up from
 down from
 to the right of
 to the left of

 the graph of $f(x)$.

8. Describe the effect on the x -values of $B(x) = |x + 5|$ for the transformation $C(x) = B(x) - 7$.

9. Describe the effect on the y -values of $p(x) = \frac{4}{5}x + 2$ for the transformation $r(x) = p(x) + 8$.

10. Describe how the graph of $M(x) = N(x + 10)$ compares to the graph of $N(x) = x^2 + 3$.
