

Algebra 1: Unit 13, Lesson 8

1. Carlton and Frankie are working together on a problem. They are asked to create an expression which represents the amount of good muffins baked when 4 muffins per batch are burned. Each batch contains 35 muffins, and c represents the number of batches baked.

Carlton states that the expression to represent the problem is $35c - 4c$.	Frankie states the expression that represents the problem is $35c - 4 = c$.
---	--

Who is correct and why?

2. John is setting up a playground for his children. It takes him h hours to set up the playground. After $2\frac{5}{8}$ hours of setting up the playground, it begins to rain. Write an expression that represents the amount of time that John has left to set up the playground.

3. Consider the expression $178\left(\frac{1}{2}\right)^x$. Which part of the expression represents the coefficient?
