

Algebra 1: Unit 13, Lesson 9

1. Logan bought a new printer and subscribed to a monthly ink delivery plan for school. The equation that models this cost is $c(x) = 0.25x + 100$.

What does the variable x represent in this scenario?

2. Cory is studying bacterial growth in biology. He is given an equation $y = 110(5)^x$ to represent the growth of the colonies he is currently studying over a number of hours.

What does the quantity 110 represent?

3. Carly hired a web designer to design a website and subscribed to a monthly online hosting plan. The equation that models this purchase is $y = 4.57x + 158$.

What does the value 4.57 represent?
