

Algebra 1: Unit 13, Lesson H1

1. The functions $f(x)$ and $g(x)$ are shown on the graph.

The function $g(x)$ is represented by the transformation $kf(x)$. What is the k value?

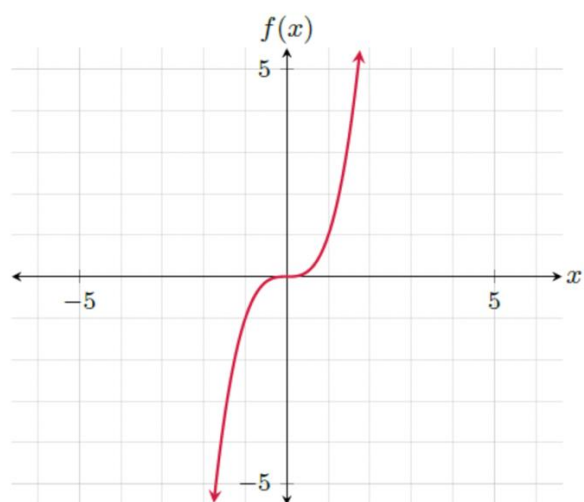

2. The table of values for functions $r(x)$ and $s(x)$ are shown.

$r(x)$		$s(x)$	
x	y	x	y
-8	8	-8	13
-7	7	-7	12
0	0	0	5
5	5	5	10
10	10	10	15

Complete the statement.

The function $s(x)$ is represented by the transformation $r(x) + k$. What is the k value?

3. The graph of function $f(x)$ is shown on the coordinate grid.

What transformation would occur to the graph $f(x - 2)$?
