

1. In 2021, a research group surveyed 6,423 adults to determine how they watch television. Participants choose between cable and satellite services or other services such as streaming.

An incomplete two-way frequency table is shown.

	Cable and Satellite Services	Other Services	Total
Men	1,725		3,248
Women		1,764	
Total	3,136		

- Determine the number of women who were surveyed.
- Determine the number of people who watch television using other services.
- Determine the joint frequency for women who watch television using cable and satellite services.
- List all of the values in the two-way frequency table that are marginal frequencies.

2. Skye is a biologist who conducted a study on the abundance of birds on cacao farms in Costa Rica compared to the abundance of birds in a nearby rainforest. Skye used a segmented bar graph, as shown, to display the data for two different species of birds.

- a. Use the segmented bar graph to complete the two-way frequency table.

	Flycatcher	Hummingbird	Total
Cacao Farm			
Rainforest			
Total			

- b. Explain using the segmented bar graph or frequency table whether there is an association between a bird's location and the abundance of birds.

3. Students in each class at Leesburg High School were asked whether they have to do chores at home and whether they receive an allowance. Two-way frequency tables that show some of the results of the survey are shown.

a. Complete each two-way frequency table.

Freshmen				Sophomores			
	Do Get An Allowance	Do Not Get An Allowance	Total		Do Get An Allowance	Do Not Get An Allowance	Total
Do Chores	96			Do Chores		62	193
Do Not Do Chores			181	Do Not Do Chores		58	76
Total		146	302	Total			
Juniors				Seniors			
	Do Get An Allowance	Do Not Get An Allowance	Total		Do Get An Allowance	Do Not Get An Allowance	Total
Do Chores	101			Do Chores		84	189
Do Not Do Chores		23		Do Not Do Chores	21		63
Total	172		267	Total			

- b. Use the frequency tables for each class to create a frequency table that shows the results of the survey for all of the students at Leesburg High School who responded to the survey.

	Do Get an Allowance	Do Not Get an Allowance	Total
Do Chores			
Do Not Do Chores			
Total			1,090

4. A survey found that of 2,000 high school seniors surveyed 1,800 have their driver's license. Of those who have their driver's license, 1,350 have a job. Of the seniors who do not have a driver's license, 40 have a job.

- a. Complete the frequency table.

	Has a Job	Does Not Have a Job	Total
Has Driver's License	1,350		1,800
Does Not Have a Driver's License	40		
Total			2,000

- b. Explain how the information in the table or the segmented bar graph can be used to show that there is an association between having a job and having a driver's license.
