

## Algebra 1: Unit 14, Lesson 1

1. Anna took a survey during her science class according to gender and shirt preference. The data she found is summarized in the list and two-way frequency table as shown.

- 5 males prefer long sleeves.
- 7 total students prefer long sleeves.
- 3 females prefer short sleeves.
- 10 students prefer short sleeves.
- 2 males prefer sweaters.
- 13 females were surveyed.
- There are a total of 27 students in the class.

|        | Short Sleeve | Long Sleeve | Sweater | Total |
|--------|--------------|-------------|---------|-------|
| Male   |              | 5           | 2       |       |
| Female | 3            |             |         | 13    |
| Total  | 10           | 7           |         | 27    |

How many total males are in the class?

2. Trevor took a class poll to see how many students play tag at recess. The results are shown in the two-way table.

|        | Plays Tag | Does Not Play Tag | Total |
|--------|-----------|-------------------|-------|
| Male   | 9         | 8                 | 17    |
| Female | 10        | 4                 | 14    |
| Total  | 19        | 12                | 31    |

There are 19 students who play tag at recess. This is the total of one category. What type of frequency does this number represent?

3. Jose made a class survey to see how many students drank chocolate milk or strawberry milk at lunch. The results are shown in the two-way frequency table.

|        | Chocolate Milk | Strawberry Milk | Total |
|--------|----------------|-----------------|-------|
| Male   | 7              | 1               | 8     |
| Female | 15             | 2               | 17    |
| Total  | 22             | 3               | 25    |

The total number of students in the class is 25. Does this number represent a joint or marginal frequency?
