

Algebra 1: Unit 14, Lesson 4

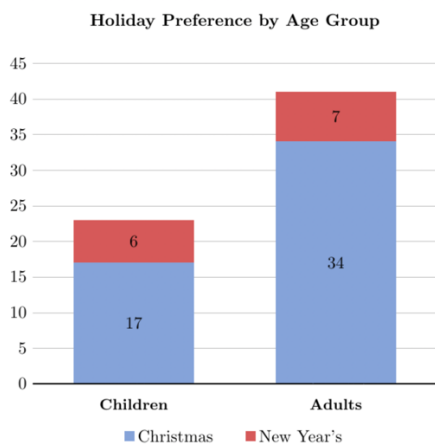

1. A librarian is collecting data to determine if there is an association between grade and book genre preference. The data collected by the librarian is shown in the table.

	Fiction Books	Nonfiction Books	Total
Fourth Grade	10	19	29
Fifth Grade	11	2	13
Total	21	21	42

What fraction of the total students are in fourth grade and prefer nonfiction books?

2. Emilee surveyed her neighbors to determine if there was an association between age and holiday preference. The results are shown in the table and segmented bar graph.

	Christmas	New Years	Total
Children	17	6	23
Adults	34	7	41
Total	51	13	56

About what fraction labeled "Children" is red?

3. Jose would like to know if there is any association between playing a sport and being in a school club. The data he collected is shown in the table and segmented bar graph

	Plays Sports	Does not Play Sports	Total
Member of a School Club	20	10	30
Not a Member of a School Club	20	5	25
Total	40	15	55

Is the proportion of students who do not play sports the same or not the same for both members and nonmembers of the school club?
