

Point R and $\overleftrightarrow{WB}$ are shown.

Steps to construct a line that passes through point R and is parallel to $\overleftrightarrow{WB}$ are shown.

Step	Description
A	Fold $\overleftrightarrow{WB}$ so that it coincides with itself and goes through point R .
B	Draw a line on the fold that passes through the dotted line and is parallel to $\overleftrightarrow{WB}$.
C	Fold $\overleftrightarrow{WB}$ so that it coincides with itself and the fold goes through point R .
D	Draw a dotted line through point R and $\overleftrightarrow{WB}$ to represent the fold. Label the point of intersection K .
E	Name the parallel line $\overleftrightarrow{NY}$.

Use the letter of the steps to correctly reorder the steps for constructing a parallel line.

5.	

Parallel planes P and K are shown where plane S is perpendicular to both planes P and K .

6. Identify an object, if there is one, that is considered to be one-dimensional, has no height and no width, and has infinite length.
7. Identify two lines, if there are any, that are skew lines.
8. Identify two lines, if there are any, that lie on the same plane.
9. Identify two lines, if there are any, that do not intersect and lie on the same plane.
10. Identify two lines, if there are any, that are perpendicular.
