

Line RW and points N and Y are shown.

1. Fold the paper so that the fold goes through points N and Y and line RW coincides with itself. Draw a dashed line on the grid that shows the fold.
2. Two students wrote a description of the relationship the dashed line has with line RW .

Olivia	Makayla
The dashed line divides line RW in half.	The dashed line makes a right angle with line RW .

Write a brief explanation that describes which student’s description is not correct.

Olivia’s description is not correct; the dashed line is 4 units from R and 3 units from W .

3. Fold the dashed line on itself so that point N coincides with line RW . Draw a line along the fold and name the line BK .

Complete the statements about the construction of the dashed line and line BK using words from the word bank.

Word Bank					
line	line segment	parallel	perpendicular	plane	point

4. The homework paper represents a plane.
5. Lines RW and BK are parallel.
6. The dashed line that passes through points N and Y is perpendicular to lines RW and BK .

Perpendicular planes M and R are shown.

7. Identify two lines that are parallel.
 $\overrightarrow{WH} \parallel \overrightarrow{KS}$
8. Identify two lines that are perpendicular and lay in plane R .
 $\overrightarrow{KS} \perp \overrightarrow{DS}$
9. Identify two lines that are perpendicular and lay in plane M .
 $\overrightarrow{WH} \perp \overrightarrow{HB}$
10. Identify two lines that are skew. $\overrightarrow{HB}$ and $\overrightarrow{DS}$ or $\overrightarrow{HW}$ and $\overrightarrow{DS}$
