

Geometry: Unit 3, Lesson 6

1. What are the types of angle pairs that are congruent when two parallel lines are intersected by a transversal?

2. What angle pairs are supplementary when two parallel lines are intersected by a transversal?

3. Lines HD , NG , and MP are shown, where $\overleftrightarrow{HD} \parallel \overleftrightarrow{NG}$ and $\overleftrightarrow{MP}$ is a transversal. $m\angle HRM = (9m - 12)^\circ$ and $m\angle PTN = (4m + 10)^\circ$. What is the equation to solve for m ?
