

Geometry: Unit 3, Lesson 9

1. An incomplete proof is shown. What is the reason that completes Step 3 of the proof?

Statement	Reason
1. $m\angle PVX = 57^\circ$ and $m\angle FWR = 123^\circ$	1. Given
2. $m\angle PVX + \angle FWR = 180^\circ$	2. Addition property
3. _____	3. Definition of supplementary

Given: $\overleftrightarrow{SM} \parallel \overleftrightarrow{TN}$, $\angle GFB \cong \angle BKG$

Prove: $\overleftrightarrow{WP} \parallel \overleftrightarrow{RH}$

2. An incomplete proof is shown. What is the reason that completes Step 3 of the proof?

Statement	Reason
1. $\overleftrightarrow{SM} \parallel \overleftrightarrow{TN}$	1. Given
2. $\angle GFB \cong \angle BKG$	2. Given
3. $\angle GFB \cong \angle FBN$	3. _____
4. $\angle FBN \cong \angle BKG$	4. Transitive Property of Congruence
5. $\overleftrightarrow{WP} \parallel \overleftrightarrow{RH}$	5. If two lines are intersected by a transversal so that corresponding angles are congruent, then the lines are parallel.

Given: $\overleftrightarrow{SM} \parallel \overleftrightarrow{TN}$, $\angle GFB \cong \angle BKG$

3. An incomplete proof is shown. What is the reason that completes Step 4 of the proof?

Statement	Reason
1. $m\angle FDP + m\angle RND = 180^\circ$	1. Given
2. $\angle RND \cong \angle KDP$	2. Given
3. $m\angle RND = m\angle KDP$	3. Definition of congruence
4. $m\angle FDP + m\angle KDP = 180^\circ$	4. [Drop Down 1]

Given: $m\angle FDP + m\angle RND = 180^\circ$, $\angle RND \cong \angle KDP$

Prove: $m\angle FDP + m\angle KDP = 180^\circ$
