

Geometry: Unit 6, Lesson 2

1. The diagram shows four different single transformations of $\triangle VMK$. What triangle is created by rotating $\triangle VMK$?

2. The diagram shows four different single transformations of $\triangle NRB$. What transformation was applied to $\triangle NRB$ to create the triangle $\triangle YSG$.

3. An image of points on the coordinate plane is shown. What point represents the result if point A is reflected over the line $y = x$?
