

Geometry: Unit 8, Lesson 7

1. Trapezoid $NHRW$ with midsegment $\overline{GP}$ is shown. $HP = x + 4$, $PR = 4x - 2$, $GP = 12$, and $NH = 5x - 2$. What is an equation that can be used to find the value of x ?

2. Trapezoid $KHSV$ with midsegment $\overline{WR}$ is shown. Is the statement $\overline{WR} = \frac{1}{2}(\overline{KH} + \overline{VS})$ true?

3. Isosceles trapezoid $TWCM$ where $m\angle TMW = (6x - 7)^\circ$, $m\angle MTW = (13x + 11)^\circ$, $m\angle MWC = (7x - 6)^\circ$, $\overline{TM} = (2x + 5)$, and $\overline{WC} = (3x - 2)$ is shown. What equation is needed to find the value of x ?
