

Geometry

Unit 9

Lesson 4 Homework

Name _____

Date _____

Period _____

Given the graph.

1. Draw the transformation of the triangle reflected across the y -axis.
2. What three-dimensional shape would be created by rotating the triangle around the y -axis?
3. What are the base and height measurements of the three-dimensional shape, in units?
4. Draw the transformation of the triangle reflected across the x -axis in a different color.
5. What three-dimensional shape would be created by rotating the triangle around the x -axis?

Given the circle.

6. Draw the transformation of the circle reflected across the y -axis.
7. What three-dimensional shape would be created by rotating the circle around the y -axis?
8. Name one real world object that exhibits the three-dimensional shape created.

9. Draw a two-dimensional figure and an axis of rotation that would result in the real-world object when the two-dimensional figure is rotated around the axis of rotation.

Image	Two-Dimensional Figure
A soccer ball with a radius of 4.5 inches 	
An umbrella with a radius of 18 inches
