

Geometry: Unit 9, Lesson 4

1. What is the altitude of the triangle? Round to the nearest tenth of a centimeter.

2. Tommy wants to rotate the line displayed in the grid shown 90° counterclockwise with the origin as the center of rotation. What is the new location of the point at $(3, 4)$ after the rotation?

3. The point $(4, -2)$ is shown on the coordinate grid. What are all the possible coordinates of the image after a 90° rotation about the origin?
