

Geometry
Unit 10
Lesson 2 Homework

Name _____
Date _____
Period _____

For questions 1-2, Circle R is shown where points M and Q are on the circle.

1. What is the ratio of the central angle, $\angle QRM$, to the whole circle? Simplify the ratio.
2. What fraction of the circle's circumference does $\widehat{MQ}$ represent?

For questions 3-8, find the ratio of the arc length to the circumference of the circle.

3.

4.

5.

6.

7.

8.

For questions 9-10, consider the following information.

Points X and Y lie on Circle T . The radius $\overline{TY}$ measures 8 inches (in.). A smaller Circle T with a radius measure of 5 in. rests inside the larger Circle T , where points Q and Z lie on the smaller circle. The smaller Circle T has central angle $\angle QTZ$ that measures 85° and the larger Circle T has central angle $\angle XTY$ that measures 85° .

9. What is the ratio of the arc length to circumference of Circle T with radius measure of 8 in.?
10. What is the ratio of the arc length to circumference of Circle T with radius measure of 5 in.?
