

Geometry: Unit 11, Lesson 5

1. Given $m\angle GPW = 95.2^\circ$, $m\angle NRP = 136.8^\circ$, and $m\angle SWR = (3x - 3.4)^\circ$, if the sum of the three angles equals 360° , what is the value of x ?

2. Triangle RGH is shown, where $m\angle RGH = (5x + 1)^\circ$, $m\angle GHR = (6x + 6)^\circ$, and $m\angle HRG = (11x - 3)^\circ$. What equation can be used to find the value of x ?

3. Triangle MKC is shown, where $m\angle KMC = 26^\circ$ and $m\angle MCK = 47.3^\circ$. What is the $m\angle CKM$?
