

Geometry: Unit 12, Lesson 3

- Circle C is shown with points B, H , and G on the circle and points K, D, N , and A outside the circle. Give a segment that is tangent to circle C ?

- H, K , and P are collinear points, where point H is between points K and P . $KH = x$ units, $PH = x + 2$ units, and $KP = 24$ units. What is the length of $\overline{HP}$?

- Circle C is shown with points R, S, W , and N on the circle and points Z, T, D, G, H , and M outside the circle.
