

1. Graph the equations $y = \frac{1}{5}x - 1$ on the coordinate plane.

$$y = \frac{1}{5}x - 1 \qquad y = -5x + 5$$

2. The equations $y = \frac{1}{5}x - 1$ and $y = -5x + 5$ resulted in

- ☐ parallel
- ☐ perpendicular
- ☐ vertical

lines.

3. The slopes of the equations are

- ☐ equal.
- ☐ undefined.
- ☐ opposite reciprocals.

4. Rewrite the equation $x + 3y = -18$ in slope intercept form and graph the equation using slope-intercept form.

5. Determine if $x + 3y = -18$ is parallel, perpendicular, or neither to the graph of the equation $y = -\frac{1}{3}x + 2$.
6. Graph the equation $y = -\frac{1}{3}x + 2$ on the graph to verify your answer to 5.
7. Which equation represents a line which is perpendicular to the line $y = -\frac{8}{3}x - 1$?
- A. $8x + 3y = 15$
 - B. $8y - 3x = 48$
 - C. $-3x - 8y = -56$
 - D. $8x - 3y = -24$
8. Which equation represents a line which is parallel to the line $3x + y = -40$?
- A. $y = -3x + 3$
 - B. $y = 3x - 5$
 - C. $y = -\frac{1}{3}x + 8$
 - D. $y = \frac{1}{3}x - 2$
