

Geometry: Unit 13, Lesson 11

1. What are the points that would create a segment perpendicular to segment $\overline{AB}$ through Point B , if the coordinates are $A(5, -2)$ and $B(3, -6)$?
2. Line segment GH has endpoints $G(3, 6)$ and $H(7, 1)$. Line segment PT has endpoints $P(2, 2)$ and $T(7, 6)$. Are Line segments GH and PT congruent and perpendicular?
3. What is the length of a line segment with endpoints at $(2, 6)$ and $(8, 7)$? Round to the nearest hundredth.
