

1. Complete the statements.

Patty paper is similar to a

- ☐ line.
- ☐ point.
- ☐ plane.

Drawing a figure on patty

paper and then turning the patty paper represents a

- ☐ reflection
- ☐ rotation
- ☐ translation

of the figure. Drawing a figure on patty paper and then moving the patty

paper to the right and up represents a

- ☐ reflection.
- ☐ rotation.
- ☐ translation.

Drawing a

figure on patty paper and then flipping the patty paper over represents a

- ☐ reflection.
- ☐ rotation.
- ☐ translation.

Reflections, rotations, and translations are known

as

- ☐ mappings.
- ☐ rigid transformations.
- ☐ non-rigid transformations.

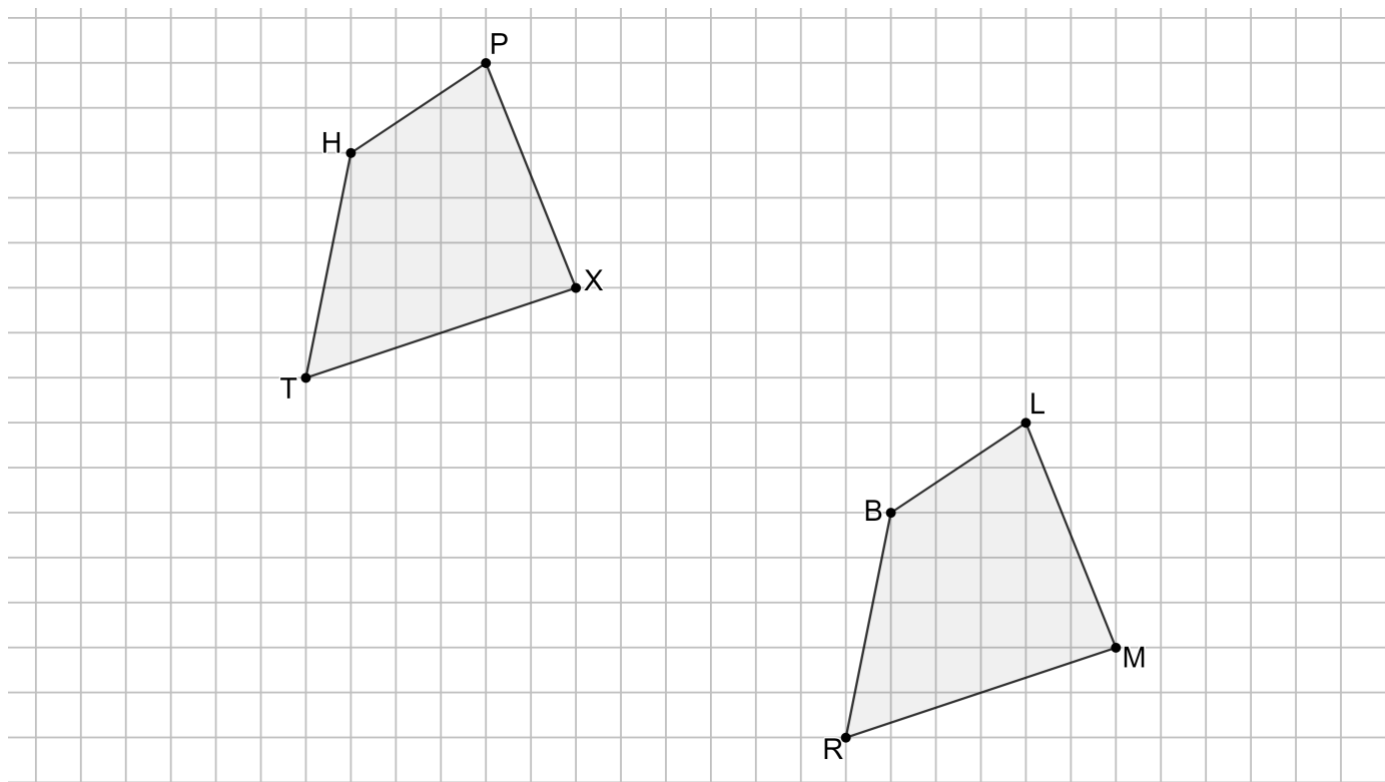

2. Line segments MK and KS are shown.

a. What is the scale factor can be used to dilate $\overline{MS}$ to create $\overline{MK}$?

b. Use the letter W to label the midpoint of $\overline{KS}$.

3. Quadrilaterals $LMRB$ and $PXTH$ are shown. Draw the mapping of each vertex of $LMRB$ for the transformation that was used to create $PXTH$.

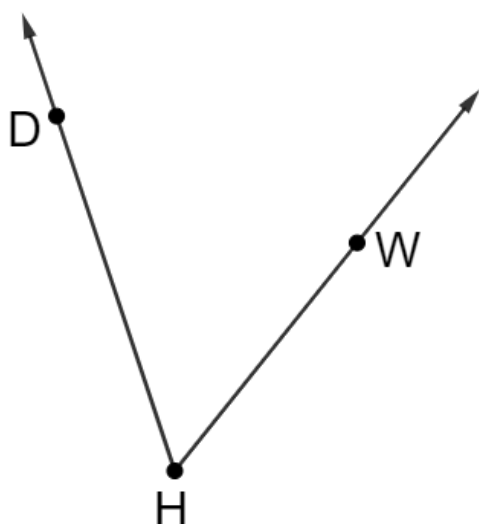

4. Points T , M , and B are collinear. Point T is between M and B .
 $MB = 12x + 44$, $BT = 11x - 1$, and $MT = 8x - 11$.
- a. Find the value of x . Show your work.

$x =$	
-------	--

- b. What is the length of $\overline{MT}$?

$MT =$	
--------	--

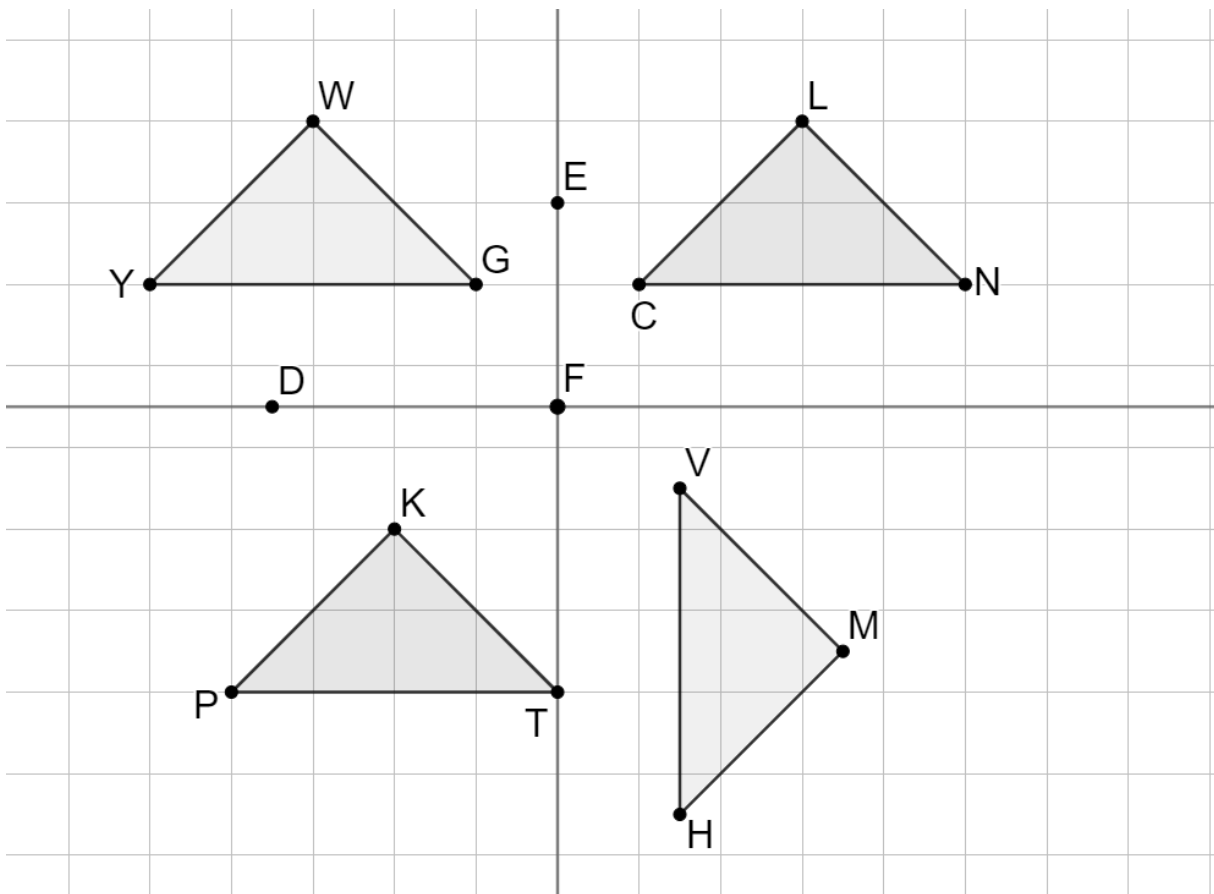

5. Use the given ray to construct a copy $\angle DHW$.

Complete the table for each description.

	Description	Defined or Undefined?	Term
6.	Lines that lie in the same plane and do not intersect.	☐ A defined term ☐ An undefined term	☐ parallel lines ☐ perpendicular lines ☐ skew lines ☐ parallel planes ☐ perpendicular planes
7.	An object that has infinite length, infinite width, and zero height.	☐ A defined term ☐ An undefined term	☐ line ☐ plane ☐ skew planes ☐ straight angle ☐ perpendicular lines

8. Four triangles are shown.

- Describe the single transformation of $\triangle LNC$ that was used to create $\triangle WYG$.
- Describe the single transformation of $\triangle LNC$ that was used to create $\triangle KTP$.
- Describe the single transformation of $\triangle LNC$ that was used to create $\triangle MHV$.

9. Triangles XGW and MKR are shown where ΔMKR is a transformation of ΔXGW .

- a. Complete the table to describe the transformation that was used to create ΔMKR .

Type of Transformation	Center, Line, or Movement	Degrees or Scale Factor
☐ Dilation ☐ Rotation ☐ Reflection ☐ Translation	☐ Center of dilation is _____. ☐ Center of rotation is _____. ☐ Line of reflection is _____. ☐ Down ☐ Left ☐ Right ☐ Up	

Complete each statement.

b.

$$\overline{XW} \cong \underline{\hspace{2cm}}$$

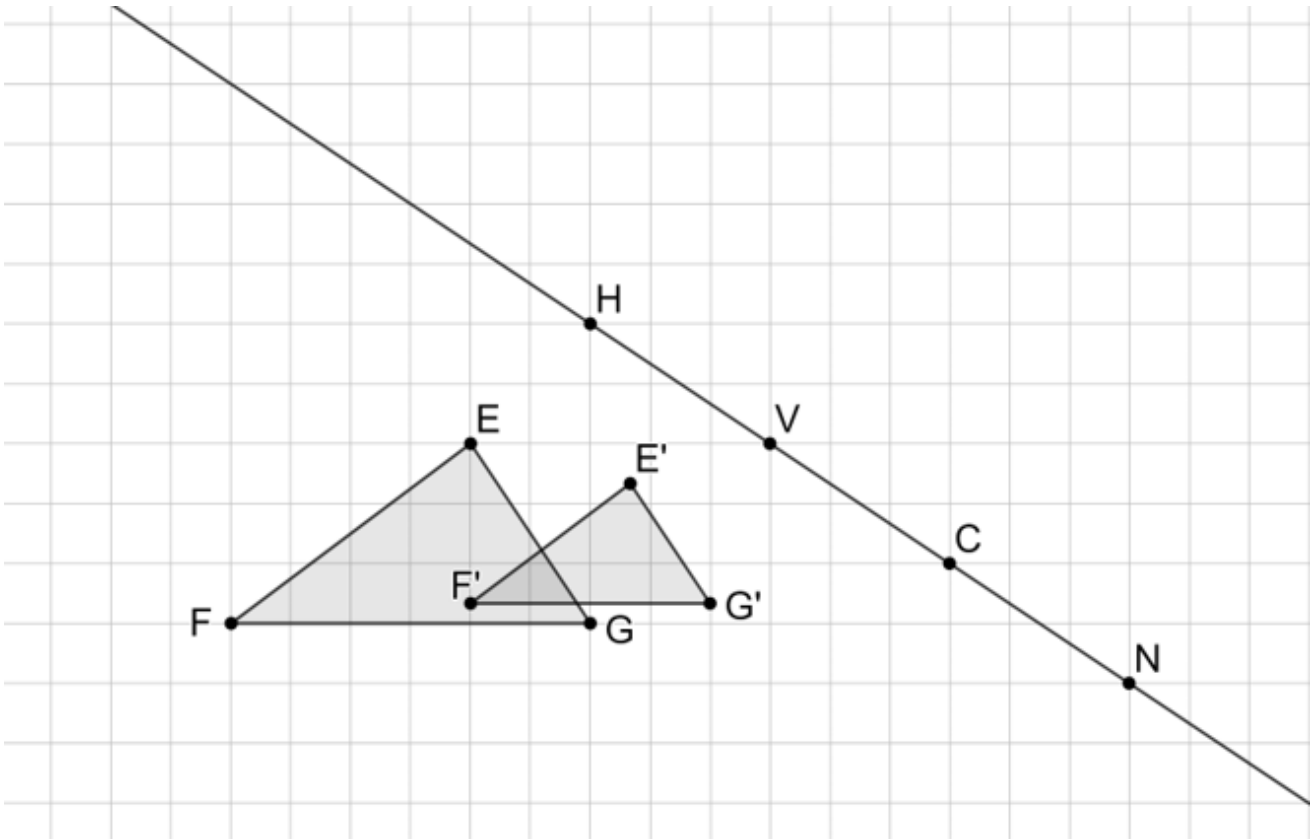

c.

$$\angle GWX \cong \underline{\hspace{2cm}}$$

d.

$$\underline{\hspace{2cm}} \cong \overline{KR}$$

10. Triangles EFG and $E'F'G'$ are shown where $\Delta E'F'G'$ is a transformation of ΔEFG .

Complete the table to describe the transformation that was used to create $\Delta E'F'G'$.

Type of Transformation	Center, Line, or Movement	Degrees or Scale Factor
☐ Dilation ☐ Rotation ☐ Reflection ☐ Translation	☐ Center of dilation is _____. ☐ Center of rotation is _____. ☐ Line of reflection is _____. ☐ Down ☐ Left ☐ Right ☐ Up	

11. $\overline{HD}$ is the perpendicular bisector of $\overline{KY}$ such that point D lies on $\overline{KY}$.
 $DK = 7y + 17$, $HY = 4y + 33$, $DY = 10y - 22$, and $HK = 6y + 7$.

a. Find the value of y .

$y =$	
-------	--

b. What is the length of $\overline{KY}$?

$KY =$	
--------	--

12. $\overrightarrow{KR}$ bisects $\angle PKN$ such that $m\angle PKR = 9x + 2$ and $m\angle NKR = 4x + 19.5$.

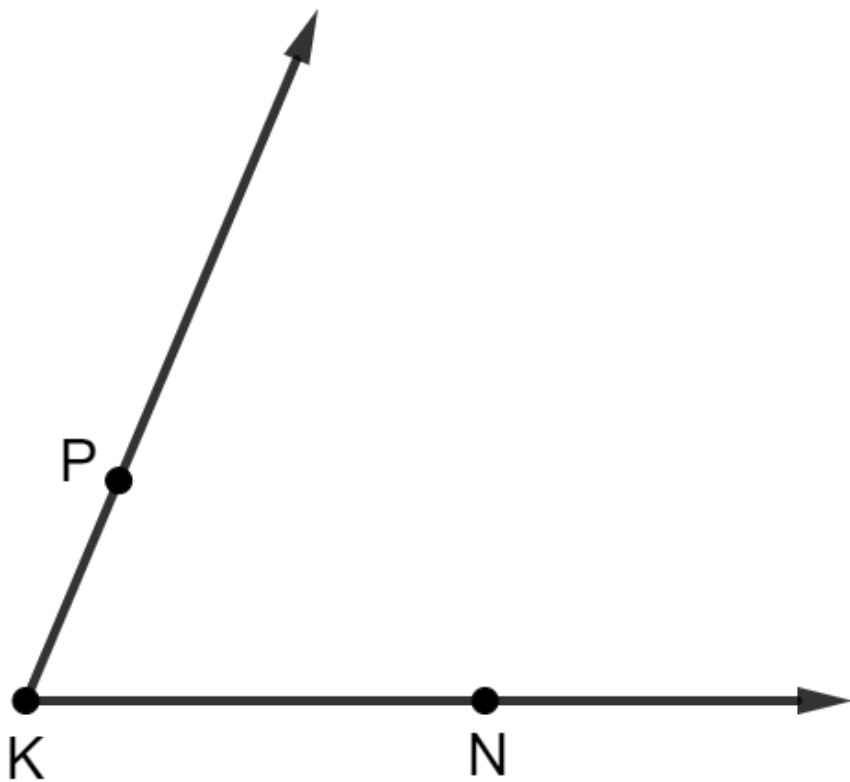

a. Find the value of x .

$x =$	
-------	--

b. Determine $m\angle PKN$.

$m\angle PKN =$	
-----------------	--

13. Construct the angle bisector of $\angle PKN$.

14. Construct the perpendicular bisector of $\overline{YZ}$.
