

Line segment  $YW$  and point  $C$  are shown on plane  $H$ .

Draw an example of each geometric object on plane  $H$ . Label your drawing. If it is not possible to create a drawing then explain why it is not possible.

|    | Geometric Object                                                                      | Label | Explanation |
|----|---------------------------------------------------------------------------------------|-------|-------------|
| 1. | A line that lies in plane $H$ .                                                       |       |             |
| 2. | A line that is skew to the $\overline{YW}$ .                                          |       |             |
| 3. | A line that is parallel to $\overline{YW}$ that does not go through point $C$ .       |       |             |
| 4. | A line segment that is perpendicular to $\overline{YW}$ that goes through point $C$ . |       |             |

5. Select all of the geometric objects in the drawing that are undefined.

- ☐ point  $C$
- ☐ plane  $H$
- ☐ line segment  $YW$
- ☐ the skew line you drew
- ☐ the parallel line you drew
- ☐ the perpendicular line you drew

Planes  $T$ ,  $W$ , and  $B$  are shown.

List the line(s) that appear to lie in each plane.

|    | Plane | Line(s) |
|----|-------|---------|
| 6. | $B$   |         |
| 7. | $T$   |         |
| 8. | $W$   |         |

9. Name a pair of lines that are perpendicular.

10. Name a pair of lines that are skew.
