

Line segment YW and point C are shown on plane H .

Draw an example of each geometric object on plane H . Label your drawing. If it is not possible to create a drawing then explain why it is not possible. **Note: Answers will vary. Sample answers are shown.**

	Geometric Object	Label	Explanation
1.	A line that lies in plane H .	$\overleftrightarrow{RS}$	
2.	A line that is skew to the $\overline{YW}$.	$\overleftrightarrow{LP}$	
3.	A line that is parallel to $\overline{YW}$ that does not go through point C .	$\overleftrightarrow{XZ}$	
4.	A line segment that is perpendicular to $\overline{YW}$ that goes through point C .	$\overline{FM}$	

5. Select all of the geometric objects in the drawing that are undefined.
- ☒ point C
 - ☒ plane H
 - ☐ line segment YW
 - ☐ the skew line you drew
 - ☐ the parallel line you drew
 - ☐ the perpendicular line you drew

Since point, line, and plane are undefined terms, point C and plane H are the correct answers.

Planes T , W , and B are shown.

List the line(s) that appear to lie in each plane. **Answers will vary.**

	Plane	Line(s)
6.	B	$\overleftrightarrow{XN}$
7.	T	$\overleftrightarrow{GX}$ and $\overleftrightarrow{ML}$
8.	W	$\overleftrightarrow{ML}$

9. Name a pair of lines that are perpendicular.

$$\begin{aligned}\overleftrightarrow{XN} &\perp \overleftrightarrow{GX} \\ \overleftrightarrow{XN} &\perp \overleftrightarrow{CN}\end{aligned}$$

10. Name a pair of lines that are skew.

$$\overleftrightarrow{LM} \text{ and } \overleftrightarrow{XN}, \overleftrightarrow{LM} \text{ and } \overleftrightarrow{CN}$$
