

Lines RN , BW , and ray BX are shown on grid paper.

1. Suppose you have a piece of patty paper that has ray BK on it. Describe how ray BK can be used to create angle XBK such that angle XBK is obtuse.
2. Draw angle XBK on the grid paper.
3. Suppose you have a piece of patty paper that has ray BH on it. Describe how ray BH can be used to create angle XBH such that angle XBH is a straight angle.
4. Draw angle XBH on the grid paper.
5. Suppose you have a piece of patty paper that has ray BL on it. Describe how ray BL can be used to create angle XBL such that angle XBL is an acute angle.

6. Draw angle XBL on the grid paper.

Micah listed key characteristics of points, lines, and planes. His list is shown.

Point	Line	Plane
has no dimension	has infinite length with no width or height	has three dimensions
indicates a position or location	has a measure of 180°	has infinite length and width, but no height
goes on forever	goes on forever in both directions	has a rectangular shape when drawn
can vary in size	can be named using two capital letters or one lowercase letter	goes on forever

Micah's list of characteristics has a few mistakes.

7. Which, if any, of Micah's characteristics of a point is not correct?

8. Which, if any, of Micah's characteristics of a line is not correct?

9. Which, if any, of Micah's characteristics of a plane is not correct?

10. Select all of the terms from the word bank that are considered undefined terms in Geometry.

Word Bank					
line	line segment	parallel	perpendicular	plane	point
