

Five frames that feature a polygon in different positions are shown.

	Movement from...	Description
1.	Frame 1 to Frame 2	Translation
2.	Frame 2 to Frame 3	Reflection
3.	Frame 3 to Frame 4	Rotation
4.	Frame 4 to Frame 5	Translation

Triangle RHB is shown on the circular graph.

5. Plot each of the points.

Point	Description
W	Plotted on the 120° line and on the same circle as B .
Y	Plotted on the 150° line and on the same circle as R .
K	Plotted on the 300° line and on the same circle as H .
T	Plotted on the 330° line and on the same circle as B .
G	Plotted on the 360° line and on the same circle as R .

6. Complete the statements about the triangles.

$\triangle HYW$ is a ☒ reflection
☐ rotation of $\triangle HRB$.

$\triangle GKT$ is a ☐ reflection
☒ rotation of $\triangle HRB$.

A diagram of $WNRB$ and $W'N'R'B'$ is shown. Arrows are drawn from vertex B to vertex B' .

Complete the statements.

7. The arrows show a possible path of movement. This path is called a

- ☐ reflection.
- ☐ rotation.
- ☒ translation.

8. The same path ☒ exists
☐ does not exist for all points on a diagram.

9. The path is called ☐ isometry.
☒ a mapping.

10. The transformation shown on the grid can be referred to as

- ☒ an isometry
- ☐ a mapping
- ☐ a rigid motion

or as

- ☐ an isometry
- ☐ a mapping
- ☒ a rigid motion

because

the transformation

- ☐ preserved distance.
- ☐ preserved angle measure.
- ☒ preserved angle measure and distance.
