

P , Q , and R are three collinear points that exist such that $\overline{PQ}$ and $\overline{QR}$ are congruent.
 $PQ = 6x - 8$ and $QR = 10x - 44$.

5. Draw a diagram that represents points P , Q , and R .

6. Find the value of x .

7. How long is segment $\overline{PQ}$?

8. How long is segment $\overline{QR}$?

9. How long is segment $\overline{PR}$?

10. Use a compass and straightedge to make a copy of this segment.
