

Geometry: Unit 1, Lesson 8

1. A line segment is shown. What is the length of line segment $\overline{AC}$?

2. A line segment, $\overline{WH}$, is shown, where $WB = 7x + 1$, $BH = 4$, and $WH = 5x + 9$. What expression can be used to find the length of segment $\overline{WH}$?

3. What is a part of a line that is bounded by exactly one endpoint?
