

1.9.2 Activity

Draw a point and label it X . Then, draw a ray starting at point X in any direction. Label the ray $\overrightarrow{XZ}$.

Set the compass' point on point G and adjust the compass' width to any width.

Draw an arc across both sides of $\angle FGH$.

Label the point where the arc crosses ray GF as point A .

Label the point where the arc crosses ray GH as point B .

Without changing the compass' width, place the compass' point on X and draw a similar arc. Label the point where the arc and ray XZ intersect point Y .

Set the compass' point on point A and adjust the compass' width to point B .

Without changing the compass' width, place the compass' point on Y and draw a similar arc to create point W where the two arcs meet.

Draw ray XW .
