Lesson 9 Practice

Name _____
Date _____
Period _____

Angle BRW and ray TH are shown.

1. Use $\overrightarrow{TH}$ to create $\angle HTX$, a copy of $\angle BRW$.

Point L lies in the interior of angle NBH as shown.

2. Draw ray BL .
3. Complete the statement.

Since point L is in the interior of $\angle$ _____ then $m\angle$ _____ + $m\angle$ _____ = $m\angle$ _____.

Angles RKH , HKD , and DKT are shown where $m\angle RKH = (4y)^\circ$, $m\angle DKH = (6y - 16)^\circ$, $m\angle DKT = (2y + 4)^\circ$, and $m\angle RKT = 132^\circ$.

4. Determine the value of y .

5. Determine $m\angle HKT$.

6. Determine $m\angle DKR$.

Points R , H , M , and D lie in the interior of straight angle YWL such that $m\angle YWM = 105^\circ$, $m\angle MWD = 43^\circ$, $m\angle HWD = 59^\circ$, and $m\angle RWH = 2m\angle HWM$.

Determine each.

7. $m\angle YWD$

8. $m\angle LWD$

9. $m\angle HWM$

10. $m\angle HWR$
