

1. Use a compass and a straightedge to construct a perpendicular bisector of $\overline{XY}$.

Line g is a perpendicular bisector of $\overline{PW}$ at point N .

2. If $PN = 4x + 17$ and $WN = 9x - 20$, find the value of x .
3. How long is $\overline{PN}$?
4. How long is $\overline{PW}$?

A quadrilateral is shown where $\overline{WY}$ is a perpendicular bisector of $\overline{ZX}$.

5. What angle is congruent to $\angle WZP$?
6. What angle is congruent to $\angle ZWP$?
7. Which angle(s) are congruent to $\angle WPZ$?
8. What kind of triangle is $\triangle XYZ$?

$\overline{SL}$ is a perpendicular bisector of $\overline{RT}$, intersecting at point N . The length of $\overline{SR}$ is $\frac{2}{3}x - 40$ and the length of $\overline{ST}$ is $\frac{1}{4}x + 12$.

9. Find the value of x .
10. Find the length of $\overline{ST}$.
