

Geometry
Unit 2
Lesson 1 Practice

Name _____
Date _____
Period _____

For questions 1-3, determine if each of the following represents a definition, postulate, or theorem. Then, draw a picture using the given information.

1. If M is the midpoint of a line segment AB , then $AM = \frac{1}{2}AB$ and $MB = \frac{1}{2}AB$.

2. Vertical angles are congruent.

3. Perpendicular lines are lines that intersect to form a right angle.

Complete the table.

	Property	Equality	Congruence
4.	Transitive	If $m\angle ABC = m\angle DEF$ and $m\angle DEF = m\angle GHI = 45^\circ$, then $m\angle ABC = 45^\circ$	If $\angle GHI \cong \angle FED$ and $\angle FED \cong \angle ABC$, then _____
5.	Reflexive		$\angle FGH \cong \angle HGF$
6.		If $m\angle XYZ = 19^\circ$, then $19^\circ = m\angle XYZ$	If $\angle XYZ = \angle FGH$, then $\angle FGH = \angle XYZ$

7. Write the conclusion for the statement and name the property.

If $m\angle QRS + m\angle LMN = 223^\circ$ and $223^\circ = m\angle GHI$, then...

Complete the table with the reason that makes the given statement true.

	Statement	Reason
8.	$m\angle MNP = m\angle DFG$	
9.	$\angle MNP \cong \angle DFG$	

10. Triangles ABC and DEF are shown.

Fill in the blanks using the information shown on the two triangles.

$EF = \underline{\hspace{2cm}}$. Therefore, $\overline{EF} \cong \underline{\hspace{2cm}}$.

$m\angle CAB = \underline{\hspace{2cm}}$. Therefore, $\angle CAB \cong \underline{\hspace{2cm}}$.

Are triangles ABC and DEF congruent? Explain.
