

Geometry

Unit 2

Lesson 2 Homework

Name_____

Date_____

Period_____

In questions 1-5, determine the type of reasoning for each statement.

1. In order to participate in school sports, students must have a minimum GPA of a 2.0. Jim has a GPA of 2.75, therefore he can participate in school sports.

2. Every Tuesday that Yolanda's family has visited a specific local restaurant, the kids' meals have been free. When Yolanda's family visits that restaurant next Tuesday, the kids' meals will be free.

3. A new movie director has grossed over 250 million for each of his first three movies. When his fourth movie is released, it will gross over 250 million.

4. Any given number multiplied by one equals itself. If 5 is multiplied by one, it will equal itself.

5. The air conditioner is set to keep a particular home at 72°F and runs off the home's electricity. During a power outage, the home will not stay at 72°F.

For each statement in 6-10, write a counterexample that disproves the statement.

6. Mary enters her home and her clothes are wet. Therefore, it is raining outside.

7. If a number is multiplied to another number, it will result in a larger number.

8. If a figure has four sides and all sides have the same length, it is a square.

9. If a number is prime, then it is an odd number.

10. Yvette lives in Jacksonville. Therefore, she lives in Florida.
