

1. Given $\overleftrightarrow{AB}$, $\overleftrightarrow{CD}$, and $\overleftrightarrow{ER}$. $\overleftrightarrow{ER}$ intersects $\overleftrightarrow{AB}$ and $\overleftrightarrow{CD}$.

Determine if the given condition could be used to justify that $\overleftrightarrow{AB} \parallel \overleftrightarrow{CD}$. Then, justify your answer.

Condition	Is $\overleftrightarrow{AB} \parallel \overleftrightarrow{CD}$?	Justification
$\angle ELA \cong \angle DMR$	☐ Yes ☐ No	
$\angle ALM \cong \angle BLE$	☐ Yes ☐ No	
$m\angle CMR + m\angle RMD = 180^\circ$	☐ Yes ☐ No	
$\angle ELB \cong \angle LMD$	☐ Yes ☐ No	
$\angle ELB \cong \angle RMD$	☐ Yes ☐ No	
If $m\angle ELB = 102^\circ$, then $m\angle ELA = 78^\circ$	☐ Yes ☐ No	
If $m\angle RMC = 91^\circ$, then $m\angle ALM = 89^\circ$	☐ Yes ☐ No	

2. $\overleftrightarrow{CM}$, $\overleftrightarrow{HI}$, $\overleftrightarrow{EN}$, and $\overleftrightarrow{AB}$ are shown where $\angle LKI = 94^\circ$.

Determine if the given conditions could be used to justify that $\overleftrightarrow{EN} \parallel \overleftrightarrow{AB}$ or $\overleftrightarrow{CM} \parallel \overleftrightarrow{HI}$. Then justify your answer.

Condition	Is $\overleftrightarrow{EN} \parallel \overleftrightarrow{AB}$ or $\overleftrightarrow{CM} \parallel \overleftrightarrow{HI}$?	Justification
$\angle CDJ \cong \angle KLM$	☐ Yes ☐ No	
$\angle CDE \cong \angle MLA$	☐ Yes ☐ No	
$m\angle EDL + m\angle NJK = 180^\circ$	☐ Yes ☐ No	
$\angle KLM \cong \angle HJN$	☐ Yes ☐ No	
$\angle JKL \cong \angle BKI$	☐ Yes ☐ No	
If $\angle BKI = 86^\circ$, then $m\angle BKI + m\angle LKI = 180^\circ$	☐ Yes ☐ No
