

Geometry: Unit 3, Lesson 5

1. Lines TC , YS , and RD are shown. $\overleftrightarrow{TC} \parallel \overleftrightarrow{YS}$ and $\overleftrightarrow{RD}$ is a transversal. Give an example of an angle pair that are consecutive exterior angles.

2. Lines BR , CN , PW , and KM are shown. $\overleftrightarrow{BR} \parallel \overleftrightarrow{CN}$ with transversals $\overleftrightarrow{PW}$ and $\overleftrightarrow{KM}$. What type of angles are $\angle ZFH$ and $\angle GLH$?

3. Lines NT , WX , and GV are shown. $\overleftrightarrow{WX} \parallel \overleftrightarrow{NT}$, $\overleftrightarrow{GV}$ is a transversal, and $m\angle VPX = 92^\circ$. What angle has a measure of $(180 - 92)^\circ$?
