

Geometry: Unit 3, Lesson 8

1. Lines WP , RH , SM , and TN are shown. $\overleftrightarrow{WP} \parallel \overleftrightarrow{RH}$ and $\overleftrightarrow{SM} \parallel \overleftrightarrow{TN}$. What is an angle that is congruent to both $\angle RFG$ and $\angle BKP$?

2. Lines GW , VN , DP , and MB are shown. $\overleftrightarrow{DP} \parallel \overleftrightarrow{MB}$ with transversals $\overleftrightarrow{GW}$ and $\overleftrightarrow{VN}$. What type of angles are $\angle MTN$ and $\angle VHD$?

3. Lines DG , HR , and MP are shown. If $\angle PTR$ and $\angle MSG$ are supplementary, why are lines DG and HR parallel?
