

Quadrilaterals $CYWR$ and $BTNH$ are shown on the coordinate grid.

- Describe a sequence of transformations that will map quadrilateral $CYWR$ onto quadrilateral $BTNH$.
- The sequence of transformations that will map quadrilateral $CYWR$ onto quadrilateral $BTNH$ includes a rotation. Describe the sequence using a different rotation.
- Complete the table that shows which vertices were mapped to each other when quadrilateral $CYWR$ was mapped to quadrilateral $BTNH$.

Quadrilateral $CYWR$	Quadrilateral $BTNH$
C	
Y	
W	
R	

- Write the algebraic description that matches the written description one of the transformations.
 $(x, y) \rightarrow$ _____
 $(x, y) \rightarrow$ _____
- Complete the congruence statement. $CYWR \cong$ _____

Quadrilaterals $KHXD$ and $TMYR$ are shown on the coordinate grid.

6. Describe a sequence of transformations that will map quadrilateral $KHXD$ onto quadrilateral $TMYR$.

7. Show the mapping of the transformations on the coordinate grid.

8. Complete the statement.

Vertex D maps to vertex _____, vertex K maps to vertex _____, vertex H maps to vertex _____, and vertex X maps to vertex _____.

9. Write the algebraic description that matches the written description of the transformations.

$$(x, y) \rightarrow \underline{\hspace{2cm}}$$

$$(x, y) \rightarrow \underline{\hspace{2cm}}$$

10. Complete the congruence statement. $KHXD \cong \underline{\hspace{2cm}}$
