

Geometry: Unit 4, Lesson 7

1. Two congruent triangles are shown on the coordinate grid. The sequence of transformations that map triangle YWF to triangle KRC is given. What vertex does vertex F map to?

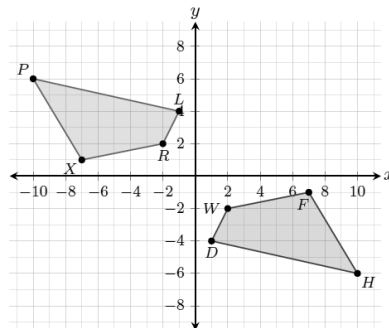

$$(x, y) \rightarrow (-y, -x)$$

$$(x, y) \rightarrow (x + 5, y + 2)$$

2. Two congruent quadrilaterals are shown on the coordinate grid. Complete the congruence statement:

$$DWFH \cong \underline{\hspace{2cm}}$$

3. Two congruent triangles are shown on the coordinate grid. What is a transformation that will map FWH to PKR ?
