

Geometry: Unit 5, Lesson 1

1. $\triangle KBF$ and $\triangle ZHY$ are shown. $\triangle KBF$ was reflected across the line to create $\triangle ZHY$. What does $\overline{KB}$ map to?

2. Two triangles are considered what when the three sides of one triangle are congruent to the three corresponding sides of the other?

3. Triangles GBL and HDT are shown, where $BG = 7.2$, $DT = 10$, $GL = 12$, $HT = 7.2$, and $DH = 12$. Danielle can use paper or a protractor to determine if the triangles are congruent. What should she use and why?
